About *Count It!*

Count It! is an app that lets you track goals. This could be positive things to achieve like meeting more often with friends or negative things to avoid like using the car where the bike would have been better. Whenever you do something, you just count it and thereby track your progress.

With *Count It!* you can see reports to see how well you did and if you're on track to meet your goals. And of course you can also share those reports.

Count It! Features

Add events to track

You can add activities to the list by simply writing the text at the bottom of the list. The list grows automatically when you add new items and adds a new field as soon as you enter text. That's akin to how lists in Google Keep work.

Just enter text to add a new activity:

| | | |
|---------------------------------------|---|---|
| Cycling | 0 | + |
| <input type="text" value="Activity"/> | | |

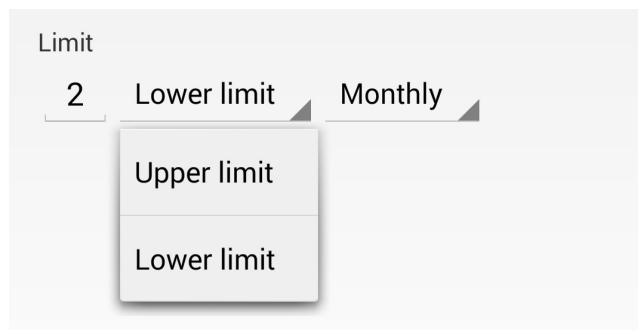

And see a new form field added as soon as you enter text:

| | | |
|---------------------------------------|---|---|
| Cycling | 0 | + |
| <input type="text" value="Hiking"/> | | |
| <input type="text" value="Activity"/> | | |

Change the style of event

If you want to get rid of a bad habit you want to set a maximum amount of times to pursue this habit. Conversely if you want to achieve some goals you want to set a minimum amount of times you want to execute the activity. You can simply change these values in the edit screen of *Count It!*

Set whether you want your limit to be the minimum number of times to do an activity or whether it should represent the upper limit:

Limit

2 Lower limit Monthly

Upper limit

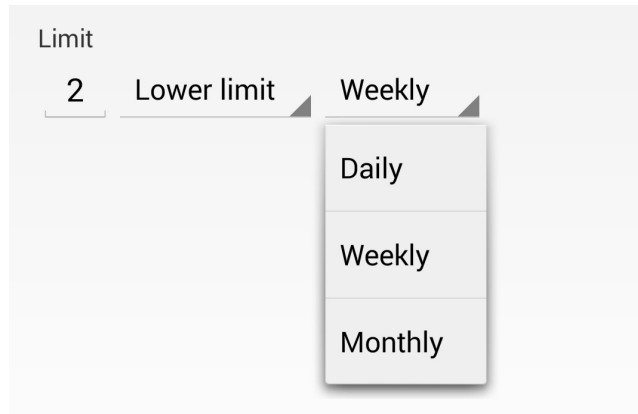

Lower limit

Of course your reports will reflect those changes as well.

Track daily, weekly or monthly events

Sometimes you want to do things on a daily basis. Sometimes weekly seems more appropriate and other times monthly.

Limit

2 Lower limit Weekly

Daily

Weekly

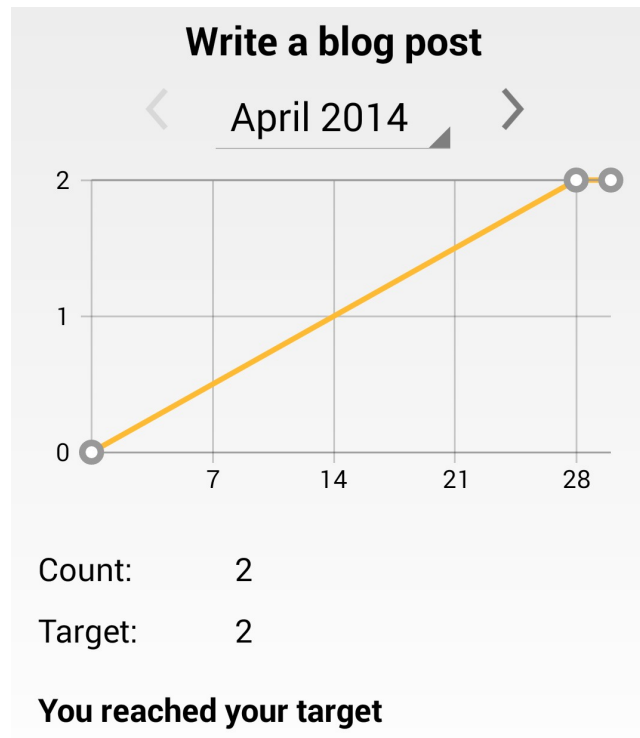

Monthly

All those bases are supported in reports as well. In future versions you will even be able to switch the base period for your reports to get even more insights.

See how you're doing

With the built-in reports you can quickly see how well you're doing and if you're on track to meet your goals.

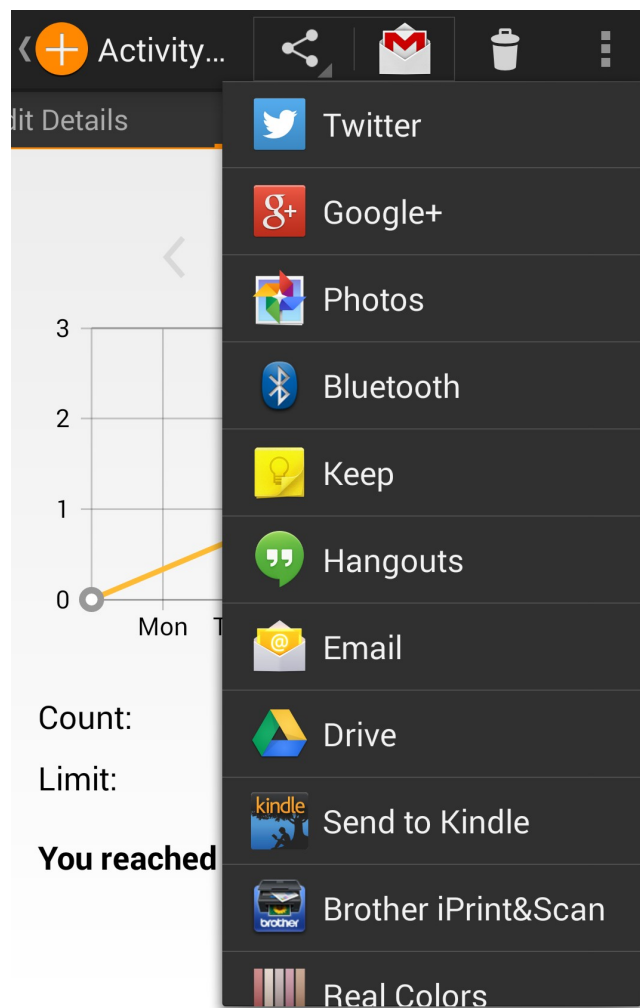

If you so wish, notifications tell you at the end of the respective periods how you have done. Of course users can turn down the cycle of notifications or even completely disable them. After all, we do not want anyone :-)

Notification frequency

| | |
|-----------------|----------------------------------|
| Never | <input type="radio"/> |
| At most monthly | <input type="radio"/> |
| At most weekly | <input type="radio"/> |
| At most daily | <input checked="" type="radio"/> |

Share your progress

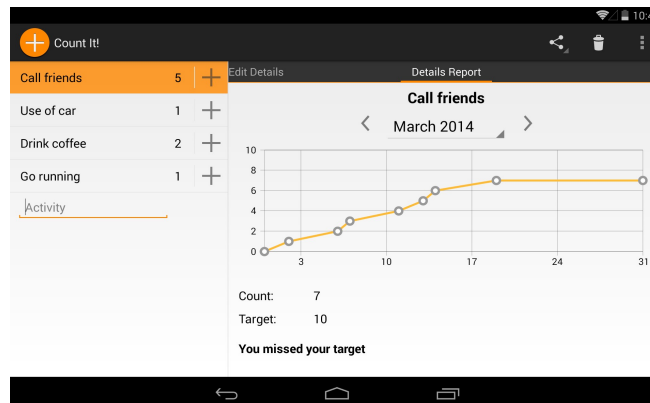

Of course you can also share your progress with friends. Using Android's standard sharing mechanism, it's easy to tell your friends how you are doing with your goals. After all, bragging about your achievements helps you to keep on track and to stay motivated.

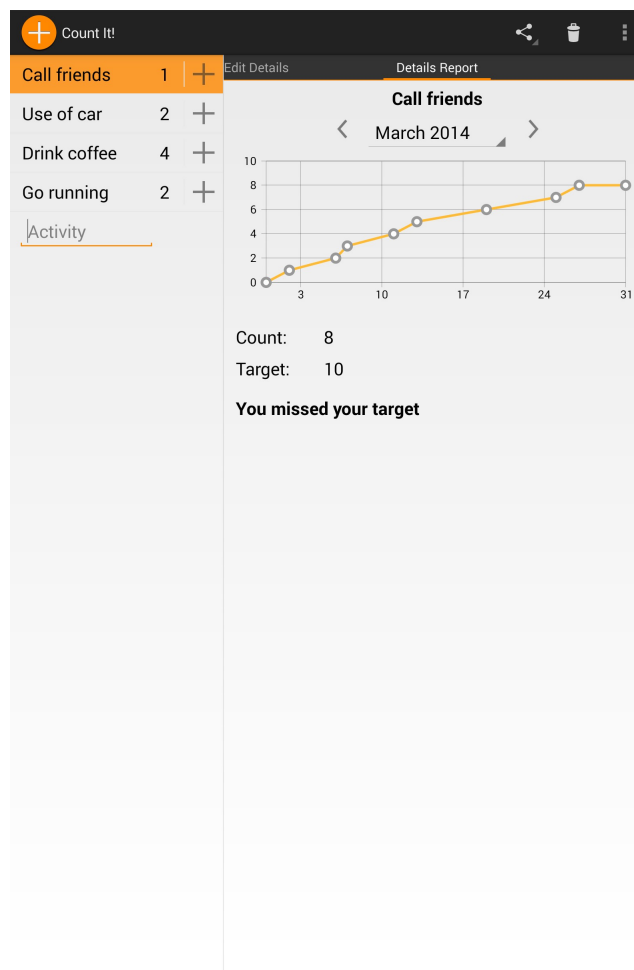

Optimized not just for phones

Android is used on plenty of devices with different screen sizes. *Count It!* takes this into consideration and runs fine on 10" and 7" tablets – and of course on phones as well.

See the Nexus 7 in landscape mode:

Or the Nexus 10 in portrait mode:

Future plans

While we are proud to just having released *Count It!*, we still have plenty of plans for the future.

Two of these plans stand out:

1. Users often have multiple devices. Out of house you probably are going to use your phone, but at home you are more likely to use a tablet. So we are going to add the possibility to use your Google account to **sync activities and your data between all of your devices**.
2. Seeing progress during weeks or months is good. But sometimes you might want to see a longer trend. How are you doing this month – or even this year. How often did you achieve your goals? How often did you miss them? Expect **more options for even better reports** in future versions.
